

## CONSTANT OR REPEATED HEADACHES

This brochure tells you about Headache and how it is diagnosed, including what Imaging tests you may need to have.

### What is a Headache?

A headache is where you have pain in your head, but sometimes your pain may also be in your neck or the top of your back. Headaches are one of the most common problems people complain about. Most headaches are caused by migraine, tension, eye strain, not drinking enough water, low blood sugar or sinusitis.

### Diagnosis

Your doctor will discuss the signs and symptoms of your headache. You would not normally need an x-ray or CT scan for diagnosis, but if your doctor thinks something more serious may be causing your headache, he/she may request a CT scan. This will help the doctor to decide what is causing the headache and what type of treatment you need.

Depending on what the CT scan shows, your doctor may request further tests which may include MRI and/or other tests.

### Further Information

For more detailed information, please see [Inside Radiology](#), a resource produced especially for consumers by the [Royal Australian and New Zealand College of Radiologists](#).

If you would like to look at other relevant brochures, please see
